Retained earnings

# Liabilities

## Definition

Liabilities are financing obligations that requires future payment of money, services or other assets  
In other words a liability is a probable future payment of assets or services that a company is presently obligated to make as a result of past transactions or events.

# Liabilities

## Classification

**Current (short-term) Liabilities**

Obligations whose settlement requires use of current assets or the incurrence of another current liability within one year or the operating cycle, whichever is longer.

**Noncurrent (Long-Term) Liabilities**

Obligations not payable within one year or the operating cycle, whichever is longer.

# Liabilities

## Alternative Classification

### Operating Liabilities

Obligations that arise from operating activities—examples are accounts payable, unearned revenue, advance payments, taxes payable, postretirement liabilities, and other accruals of operating expenses

### Financing Liabilities

Obligations that arise from financing activities—examples are short- and long-term debt, bonds, notes, leases, and the current portion of long-term debt

# Liabilities

## Analyzing liabilities

- Since liabilities are claims against companies, we need assurance that companies account for them!!
- This includes disclosure of their amounts and due dates (including any conditions, encumbrances and limitations they impose on a company)
- Many companies attempt to reduce the amount of liabilities reported on their financial statements
- Certain liabilities are more apt to be misclassified or inadequately described
- Results of our analysis of liabilities can impact our assessment of both risk and return for a company

# Liabilities

## Features in analyzing liabilities

- Terms of indebtedness (e.g. maturity, interest rate, payment pattern, amount)
- Restrictions on deploying resources and pursuing business activities
- Ability and flexibility in pursuing further financing
- Obligations for working capital, debt to equity, and another financial figures
- Dilutive conversion features that liabilities are subject to
- Prohibitions on disbursements as dividends.

# Liabilities

## Accounting-Based Liability Restrictions (Covenants)

### Aim: Safeguard creditors' investments

Common restrictions include:

- Dividend distribution restrictions
- Working capital restrictions
- Debt-to-equity ratio restrictions
- Seniority of asset claim restrictions
- Acquisition and divestment restrictions
- Liability issuance restrictions

Potential information sources: Liability prospectus, annual report, SEC filings, and ~~creditor information services (e.g., Moody's)~~

# Leases

## Leasing Facts

**Lease** – contractual agreement between a lessor (owner) and a lessee (user or renter) that gives the lessee the right to use an asset owned by the lessor for the lease term

**MLP** – minimum lease payments  
In return, the lessee makes rental payments (MLP), according to the lease contract

# Leases

## Lease Accounting and Reporting

(1) **CAPITAL LEASE ACCOUNTING** For leases that transfer substantially all benefits and risks of ownership—accounted for as an asset acquisition and a liability incurrence by the lessee, and as a sale and financing transaction by the lessor

A lessee classifies and accounts for a lease as a capital lease if, at its inception, the lease meets *any* of four criteria:

- (i) lease transfers ownership of property to lessee by end of the lease term
- (ii) lease contains an option to purchase the property at a bargain price
- (iii) lease term is 75% or more of estimated economic life of the property
- (iv) present value of rentals and other minimum lease payments at beginning of lease term is 90% or more of the fair value of leased property less any related investment tax credit retained by lessor

(2) **OPERATING LEASE ACCOUNTING** For leases other than capital leases—the lessee (lessor) accounts for the minimum lease payment (MLP) as a rental expense (income)

# Leases

## Accounting rules

### Recording rules

When a lease is classified as a capital lease, the lessee records it (both asset and liabilities) at an amount equal to the present value of the MLPs over the lease term, excluding executory costs (such as insurance, maintenance, taxes, paid by the lessor that are included in the MLPs)

### Leases disclosure

Lessee must disclose, usually in notes of financial statements: (1) future MLPs separately for capital leases and operating leases — for each of five succeeding years and the total amount thereafter, and (2) rental expense for each period an income statement is reported

# Leases

## Off-Balance-Sheet Financing

### Off-Balance-Sheet Financing

Off-Balance-Sheet financing is when a lessee structures a lease so it is accounted for as an operating lease when the economic characteristics of the lease are more in line with a capital lease—neither the leased asset nor its corresponding liability are recorded on the balance sheet

### Implications for financial analysis

The decision to account for a lease as a capital or a operating lease can significantly impact financial statements. Analyst must take care to examine the economic characteristics of a company's leases and reclassify them when necessary

# Leases

## Accounting for Leases – An Illustration

### Lease Facts

- A company leases an asset on January 1, 2000 -- it has no other assets or liabilities
- Estimated economic life of leased asset is 5 years with no salvage value -- company will depreciate the asset on a straight-line basis over its life
- Lease has a fixed non-cancelable term of 5 years with annual MLPs of \$2,505 paid at the end of each year
- Interest rate on the lease is 8% per year

# Leases

## Accounting for Leases – Illustration (continued)

### Lease Amortization Schedule

Year	Beg. Year Liability	Interest and Principal Components of MLP			Year-end Liability
		Interest	Principal	Total	
2000	\$10,000	\$ 800	\$ 1,705	\$ 2,505	\$8,295
2001	8,295	664	1,841	2,505	6,454
2002	6,454	517	1,988	2,505	4,466
2003	4,466	358	2,147	2,505	2,319
2004	2,319	186	2,319	2,505	0
Totals		\$2,525	\$10,000	\$12,525	

**Straight-line depreciation**  
**\$2,000 per year ([\$10,000 - \$0]/5 years)**

## Leases

### Accounting for Leases – Illustration (continued)

#### Income Statement Effects of Alternative Lease Accounting

Year	Operating Lease	Capital Lease		
	Rent Expense	Interest Expense	Depreciation Expense	Total Expense
2000	\$ 2,505	\$ 800	\$ 2,000	\$ 2,800
2001	2,505	664	2,000	2,664
2002	2,505	517	2,000	2,517
2003	2,505	358	2,000	2,358
2004	2,505	186	2,000	2,186
<b>Total</b>	<b>\$ 12,525</b>	<b>\$ 2,525</b>	<b>\$ 10,000</b>	<b>\$ 12,525</b>

## Leases

### Accounting for Leases – Illustration (continued)

#### Balance Sheet Effects of Capitalized Leases

Date	Cash	Leased Asset	Lease Liability	Equity
1/1/2000	0	\$ 10,000	\$ 10,000	\$ -
12/31/2000	(2,505)	8,000	8,295	(2,800)
12/31/2001	(5,010)	6,000	6,454	(5,464)
12/31/2002	(7,515)	4,000	4,466	(7,981)
12/31/2003	(10,020)	2,000	2,319	(10,339)
12/31/2004	(12,525)	0	0	(12,525)

# Leases

## Effects of Lease Accounting

### Impact of Operating Lease when Capital Lease is Apt:

- Operating lease understates liabilities—improves solvency ratios such as debt to equity
- Operating lease understates assets—can improve return on investment ratios
- Operating lease delays expense recognition—overstates income in early term of the lease and understates income later in lease term
- Operating lease understates current liabilities by ignoring current portion of lease principal payment—inflates current ratio & other liquidity measures
- Operating lease includes interest with lease rental (an operating expense)—understates both operating income and interest expense, inflates interest coverage ratios, understates operating cash flow, & overstates financing cash flow

# Leases

## Converting Operating Leases to Capital Leases

### Determining the Present Value of Projected Operating Lease Payments and Lease Amortization

Year	Payment	Discount Factor	Present Value	Interest (9%)	Lease Obligation	Lease Balance
2001						\$ 2,381
2002	\$ 388	0.917	\$ 356	\$ 214	\$ 174	2,207
2003	377	0.842	317	199	178	2,029
2004	346	0.772	267	183	163	1,866
2005	315	0.708	223	168	147	1,719
2006	289	0.650	188	155	134	1,585
2007	289	0.596	172	143	146	1,438
2008	289	0.547	158	129	160	1,279
2009	289	0.502	145	115	174	1,105
2010	289	0.460	133	99	190	915
2011	289	0.422	122	82	207	708
2012	289	0.388	112	64	225	483
2013	289	0.356	103	43	246	238
2014	259	0.326	84	21	238	0
Total	3997		2381			

## Leases

### Restated Financial Statements after Converting Operating Leases to Capital Leases—Best Buy 2002

<b>Income Statement</b>	<b>Before</b>	<b>After</b>			
Sales	\$ 15,327	\$ 15,327			
Operating Expenses	14,723	14,518			
Operating income before interest and taxes	604	809			
Interest Expense (income)	(37)	177			
Income Taxes	246	243			
Net Income	<u>\$ 395</u>	<u>\$ 389</u>			
<b>Balance Sheet</b>	<b>Before</b>	<b>After</b>	<b>Before</b>	<b>After</b>	
Current assets	\$ 2,929	\$ 2,929	Current liabilities	\$ 2,715	\$ 2,889
Fixed assets	1,911	4,292	Long-term liabilities	303	2,510
			Stockholders' equity	1,822	1,822
Total assets	<u>4,840</u>	<u>7,221</u>	Total liabilities and equity	<u>4,840</u>	<u>7,221</u>

## Leases

### Effect of Converting Operating Leases to Capital Leases on Key Ratios—Best Buy 2002

<b>Financial Ratio</b>	<b>Before</b>	<b>After</b>
Current Ratio	1.08	1.01
Total Debt to equity	1.66	2.96
Long-term debt to equity	0.17	1.38
Return on common equity	21.7%	21.4%
Return on assets	8.16%	5.39%
Times interest earned	n.a.	4.57

# Postretirement Benefits

## Postretirement Benefits Facts

Defined -- Employer-provided benefit(s) to employees after retirement

## Two kinds of Postretirement Benefits

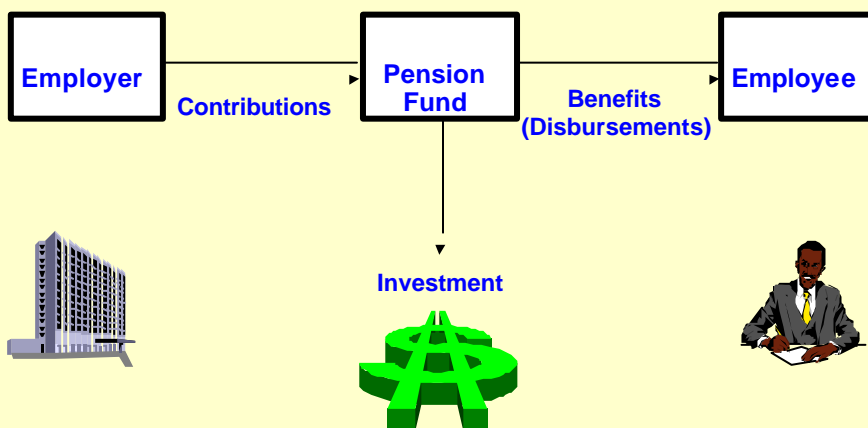

Pension benefits -- Employer-provided monetary pension benefits to employees after retirement, e.g., monthly stipend until death

Other Postretirement Employee Benefits (OPEB) -- Employer-provided non-pension (usually nonmonetary) benefits after retirement, e.g., health care and life insurance

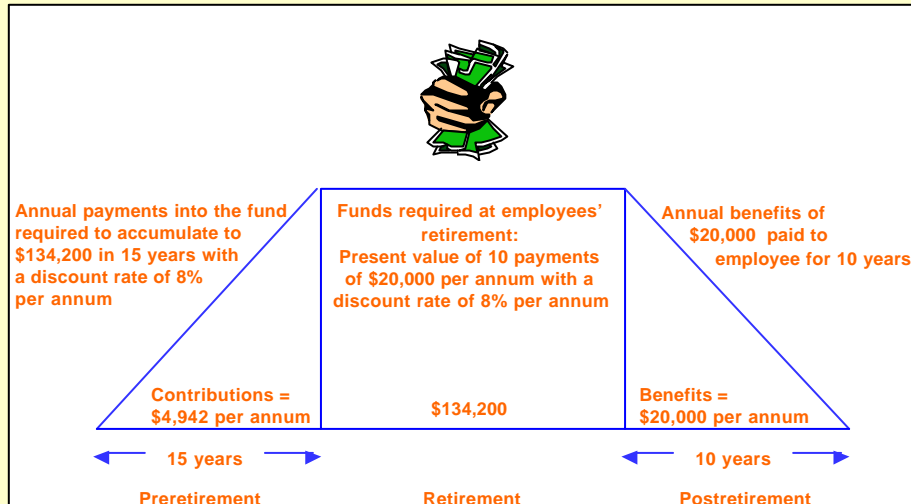

# Postretirement Benefits

## Elements of the Pension Process

# Postretirement Benefits

## Illustration of Pension Accumulation and Disbursement for a Defined Benefits Plan

# Contingencies and Commitments

## Basics of Contingencies

**Contingencies** -- potential losses and gains whose resolution depends on one or more future events.

**Contingent liabilities** -- loss contingencies: potential claims on a company's resources

- to record a contingent liability (and loss) two conditions must be met:
  - (i) it must *probable* that an asset is impaired or a liability incurred, and
  - (ii) the amount of loss is *reasonably estimable*;
- to disclose a contingent liability (and loss) there must be at least a *reasonable possibility* of incurrence

**Examples of loss contingencies**

- litigation
- threat of expropriation
- uncollectibility of receivables
- claims arising from warranties of products or products defects
- possible catastrophe losses of property

# Contingencies and Commitments

## Analyzing Contingencies

### Sources of useful information:

Notes, MD&A, and Deferred Tax Disclosures

### Useful analyses:

- Analyze management estimates
- Analyze notes regarding contingencies, including
  - Description of contingency and its degree of risk
  - Amount at risk and how treated in assessing risk exposure
  - Charges, if any, against income
- Recognize a bias to not record or underestimate contingent liabilities
- Beware of *big baths* — loss reserves are contingencies
- Analyze deferred tax notes for undisclosed provisions for future losses

Note: Loss reserves do not alter risk exposure, have no cash flow consequences, and do not provide insurance

# Off-Balance-Sheet Financing

## Basics of Off-Balance-Sheet Financing

Off-Balance-Sheet Financing -- is the non-recording of financing obligations

### Motivation

To keep debt off the balance sheet

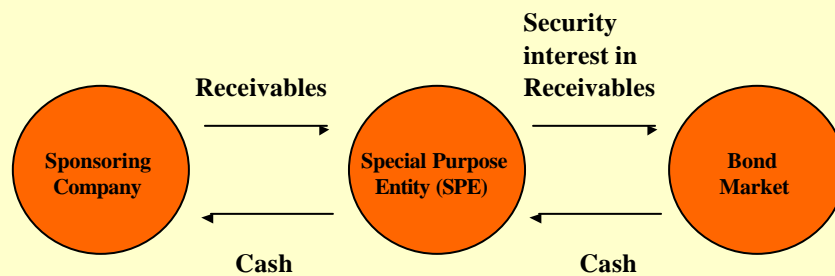

A well known "infamous example" (see the bankrupt of Enron and Pamalat): the financing mechanism using Special Purpose Entities (SPEs)

- A SPE is formed by the sponsoring company and is capitalized with equity investment
- The SPE leverages this equity investment with borrowings from the credit markets and purchases earning assets from or for the sponsoring company
- The cash flow from the earning assets is used to repay the debt and provide a return to the equity investors

## Off-Balance-Sheet Financing

### Illustration of SPE Transaction to Sell Accounts Receivable

## Shareholders' Equity

### Basics of Equity Financing

- Equity — refers to owner (shareholder) financing; its usual characteristics include:
- Reflects claims of owners (shareholders) on net assets
  - Equity holders usually subordinate to creditors
  - Variation across equity holders on seniority
  - Exposed to maximum risk and return

Equity Analysis — involves analyzing equity characteristics, including:

- Classifying and distinguishing different equity sources
- Examining rights for equity classes and priorities in liquidation
- Evaluating legal restrictions for equity distribution
- Reviewing restrictions on retained earnings distribution
- Assessing terms and provisions of potential equity issuances

Equity Classes — two basic components:

- Capital Stock
- Retained Earnings

## Shareholders' Equity

### Reporting Capital Stock

#### Sources of increases in capital stock outstanding:

- Issuances of stock
- Conversion of debentures and preferred stock
- Issuances pursuant to stock dividends and splits
- Issuances of stock in acquisitions and mergers
- Issuances pursuant to stock options and warrants exercised

#### Sources of decreases in capital stock outstanding:

- Purchases and retirements of stock
- Purchases of treasury stock
- Reverse stock splits

## Shareholders' Equity

### Components of Capital Stock

Contributed (or Paid-In) Capital — **total** financing received from shareholders for capital shares; usually consists of two parts:

- Common and/or Preferred Stock — financing equal to par or stated value; if stock is no-par, then equal to total financing
- Contributed (or Paid-In) Capital in Excess of Par or Stated Value — financing in excess of any par or stated value

Treasury Stock (or *buybacks*) — shares of a company's stock re-acquired after having been previously issued and fully paid for. Acquisition of treasury stock by a company reduces both assets and shareholders' equity. It is typically recorded at cost.

## Shareholders' Equity

### Two Types of Capital Stock

**Preferred Stock** — capital stock with features not possessed by common stock; typical preferred stock features include:

- Dividend distribution preferences
- Liquidation priorities
- Convertibility (redemption) into common stock
- Call provisions
- Sinking fund provisions

**Common Stock** — capital stock with ownership interest and bearing ultimate risks and rewards (residual interests)

## Shareholders' Equity

### Basics of Retained Earnings

**Retained Earnings** — earned capital of a company; reflects accumulation of undistributed earnings or losses since inception; retained earnings is the main source of dividend distributions

#### Cash and Stock Dividends

- Cash dividend — distribution of cash (or assets) to shareholders
- Stock dividend — distribution of capital stock to shareholders on a pro-rata basis. It represents a permanent capitalization of earnings: shareholders receive additional shares in return for reallocation of retained earnings to capital accounts.

**Prior Period Adjustments** — mainly error corrections of prior periods' statements

**Appropriations of Retained Earnings** — reclassifications of retained earnings for specific purposes

**Restrictions (or Covenants) on Retained Earnings** — constraints or requirements on retention of retained earnings

## Shareholders' Equity

### Book Value per Share

**Book Value** – refers to net asset value, that is the total assets reduced by claims against them

**Book Value per share** – is the per share value amount resulting from a company's liquidation at amounts reported on its balance sheet

**Book value of common stock** is equal to the total assets less liabilities and claims of securities senior to common stock (such as preferred stock) at amounts reported on the balance sheet

## Shareholders' Equity

### Shareholder's Equity Section of Kimberly Corp. for periods ending in Year 4 and 5

	Year 5	Year 4
Preferred stock, 7% cumulative, par value \$100 (authorized 4,000,000; outstanding 3,602,811)	\$ 360,281,100	\$ 360,281,100
Common Stock, par value \$16.67 (authorized 90,000,000 shares; outstanding 54,138,137 shares at December 31, Year 5 and 54,129,987 shares at December 31, Year 4)	902,302,283	902,166,450
Retained earnings	2,362,279,244	902,166,450
<b>Total shareholder's equity</b>	<b>\$3,624,862,627</b>	<b>\$ 2,220,298,288</b>

\*Note: Preferred stock is nonparticipating and callable at 105. Dividends for Year 5 are in arrears

## Shareholders' Equity

### Calculated Book Value per Share (end of Year 5)

	Preferred	Common	Total
Preferred stock* (at \$100 par)	\$ 360,281,100		\$ 360,281,100
Dividends in arrears (7%)	25,219,677		25,219,677
Common stock		\$ 902,302,283	902,302,283
Retained earnings (net of amount attributed to dividend in arrears)		2,337,059,567	2,337,059,567
<b>Total</b>	<b>\$ 385,500,777</b>	<b>\$ 3,239,361,850</b>	<b>\$ 3,624,862,627</b>
Divided by number of shares outstanding	3,602,811	54,138,137	
<b>Book value per share</b>	<b>\$ 107.00</b>	<b>\$ 59.84</b>	

\*The call premium does not normally enter into computation of book value per share because the call provision is at the option of the company
