Exercise XVII

Consider the following:

$S_{\frac{C_1}{C_2}}$	1.25
r_{1yr-C_1}	0.03
r_{1yr-C_2}	0.04

International Financial and Foreign Exchange Markets

Parity Conditions

- Calculate the theoretical price of a one year forward contract.
- ► What would you do if the forward price was quoted at C₁/C₂ 1.26 in the market place? Where would you borrow? Lend? Calculate the gain on a C₁ 100 million arbitrage transaction.
- What would you do if the future price was quoted at C1/C2
 1.20 in the market place? Where would you borrow?
 Lend? Calculate the gain on a C2 100 million arbitrage transaction.

Exercise XVIII

The following exchange rates and one-year interest rates exist.

	Bid	Ask
$S_{\frac{A}{B}}$	1.12	1.13
$F_{\frac{A}{B}}$	1.12	1.13

	Deposit	Loan
r _A	0.06	0.09
r _B	0.07	0.1

You have 100,000 A to invest for one year. Would you benefit from engaging in covered interest arbitrage?

International Financial and Foreign Exchange Markets

Parity Conditions

Exercise XIX

True or false? Please, explain.

- ► Ceteris paribus, based on CIRP, given any two currencies A and B, if r_A > r_B, then currency A is likely to trade at a forward discount. (Remark: r_A=interest rate on a currency A-denominated investment r_B= interest rate on a currency B-denominated investment).
- If the US inflation level increases at a much higher rate than does the Canadian inflation level, the CAD is likely to appreciate *ceteris paribus*.
