Γο put it into

Amazing growth of international trade flows all over the last decades, mainly as a consequence of:

- ▶ **Liberalization** of trade (tariffs, quotas..)
- Improvements in communication and transportation technologies (thinner economic space)

### erminology

o put it into

Foreign Direct Investments (FDI): "Cross-border investment by a resident entity in one economy with the objective of obtaining a lasting interest in an enterprise resident in another economy. The lasting interest implies the existence of a long-term relationship between the direct investor and the enterprise and a significant degree of influence by the direct investor on the management of the enterprise. Ownership of at least 10% of the voting power, representing the influence by the investor, is the basic criterion used" (Source: OECD)

## Portfolio Investments

**Portfolio Investments**: "International investment that covers investment in equity and debt securities (e.g. government and corporate bonds...), excluding any such instruments that are classified as direct investment or reserve assets" (Source: OECD)

Markets

#### Spot and Fwd Markets

The Settlement Cycle Adopted Conventions Reciprocal Rates, Cross Rates and Triangular Arbitrages

rminology

### Interbank Market

All participating banks act as Market Makers.

Banks quote buying and selling prices to each other (bank A can call bank B for a quote on a certain currency and bank B, in turn, makes a market by providing bid and ask prices upon demand)

International Financial and Foreign Exchange Markets

International Financial Markets International Trade

Foreign Exchai

#### Spot and Fwd Markets

The Settlement Cycle Adopted Conventions Reciprocal Rates, Cross Rates and Triangular Arbitrages

erminology

- ▶ **Decentralized** = no central physical location
- Continuous = quotations of prices are continuously available all over the trading day
- ▶ Open = market participants must quote both buying and selling prices (bid/ask quotations), so that the buy or sell intention and the corresponding amount need not to be specified when a bank calls another market maker
- ▶ Double-auction = market participants on both sides of a transaction can quote buying and selling prices (relatively more or less "aggressively", depending on their trading interest)

## Settlement on Regulated Markets

The settlement generally takes place via a **Clearing House Clearing House**: institution at which banks keep funds which can be moved from one bank account to another to settle interbank transactions.

International Financial and Foreign Exchange Markets

When FX transactions involve settlement in USD, the longer established clearing house is the so-called "CHIPS" (Clearing House Interbank Payments System). CHIPS is a computerized mechanism through which member banks hold USD accounts to pay each other when buying or selling FX.

erminology

An alternative system has been available since 2002: the CLS (**Continuous Linked Settlement**).

**CLS** was created to reduce settlement risk through a continuous payment versus payment system, specifically conceived to prevent all situations where a bank pays for a currency before receiving it.

nternational Financial Ma

Foreign Direct Investments and Portfolio Investments

Foreign Exchan Markets

pot and Fwo

The Settlement Cycle

Reciprocal Rates, cross Rates and friangular Arbitrages

erminology

- Following a FX trade, Settlement Members submit payment instructions to CLS. These payment instructions are then authenticated and matched by CLS and stored in the system until the settlement date
- ► The CLS daily settlement cycle operates with settlement occurring during a five-hour window (7:00am CET to 12:00am CET), when RTGS systems in the CLS settlement currency jurisdictions are open and able to make and receive payments. This enables simultaneous settlement of the payments on both sides of a FX transaction.
- On each settlement date, CLS simultaneously settles each pair of matched payment instructions by making the corresponding debit and credit entries across Settlement Members accounts.

o put it into

The **Exchange Rate** (FX) is the price of one currency in terms of another. More generally,  $\mathbf{S}_{\frac{j}{j}}$  is the number of units of currency i per unit of currency j (watch out: the international convention generally adopts the opposite notation, so that  $\mathbf{S}_{\frac{j}{j}}$  is the number of units of currency j per unit of currency i )

## Two major quoting conventions:

- ▶ Direct quotation= number of domestic currency per foreign currency unit (i.e. <sup>D</sup>/<sub>E</sub> currency)
- ► Indirect quotation= number of units of foreign currency per domestic currency (i.e. <sup>F</sup>/<sub>D</sub> currency)

Financial Markets

Reciprocal Rates,
Cross Rates and
Triangular Arbitrages

### Terminology

- ▶ One-way arbitrage: the process of choosing the best way to exchange one currency for another. To put it simple, you start with a certain currency and you end up with a different one (e.g. you exchange EUR to USD)
- ▶ Round-trip arbitrage: borrowing in one currency, lending in another, and then selling the second currency back into the first so as to end up back in the first currency. In simpler terms, you start with a certain currency and you end up with the very same one (e.g. from EUR to EUR). Watch out: Triangular arbitrages are round-trip transactions

- Terminology
- To put it into

- ► Appreciation/ Depreciation: increase/ decrease in the foreign exchange value of a currency when exchange rates are free to move (flexible, market driven)
- ► Revaluation / Devaluation : increase/decline in the foreign exchange value of a currency on fixed exchange rates. It occurs when the parity rate is set at a higher/lower level (CB driven)

- ► Comparative advantage: relative efficiency (lower opportunity cost) in producing something (i.e. static production efficiency)
- Competitive advantage: the edge a country enjoys from dynamic factors affecting international competitiveness (including dynamic factors such as the existence of supportive industries, experienced management)
- ► Tariffs (excise taxes): taxes on imports, generally based on value (ad valorem) or on weight
- Quotas: restrictions on the quantity of a good that can be imported

### Terminology

**Transaction Costs** generally refer to all the expenses incurred when buying or selling securities in financial markets.

Three major building blocks:

- ► Commissions and fees (e.g. commissions charged by a broker, fees to get direct market access, fees for settlement services...). Significant source of revenues for financial intermediaries (what about retail investors, though?)
- ► Taxes (e.g. capital gain taxes...)
- ▶ Bid-Ask spread (Lesson II)
